TWENTIETH CENTURY
BLIGHT PROOF.

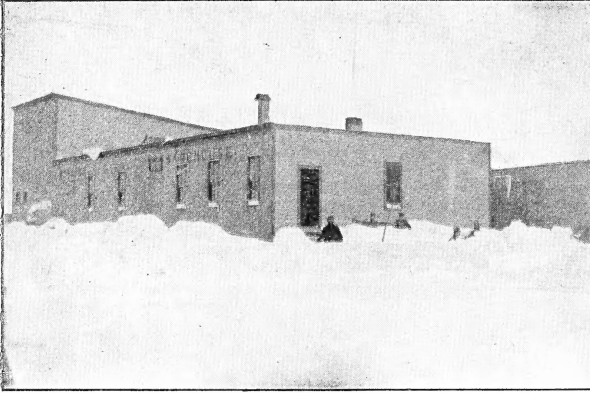

SEED POTATOES, OATS, CORN,
CLOVER & GRASS SEEDS.

IONIA SEEDLING
BEST IN THE WORLD.

EDWARD F. DIBBLE, SEED GROWER.
HONEOYE FALLS, N.Y.

WAREHOUSE A.

These two immense warehouses, 300 feet in length, are the largest, most commodious, and the most perfectly constructed buildings for the storage of potatoes for seed purposes owned by any firm of seed growers in this country.

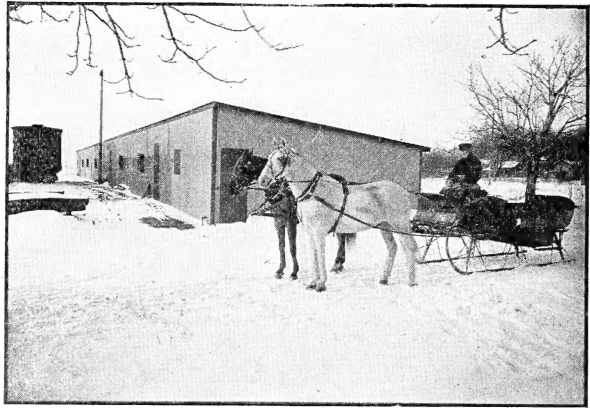

Capacity, 54,000 bushels.

TO WHOM IT MAY CONCERN:

This is to certify that I have been acquainted with the members of the firm of Edward F. Dibble, Seed Grower, for many years and that I regard them very highly, as strictly reliable and honorable in their dealings and entitled to confidence.

They are one of the largest concerns dealing in farm seeds in this country. Mr. Dibble, the president of the company, is a practical farmer and one of the largest land owners, having about 1000 acres in this vicinity. He is an up-to-date farmer and tests new varieties of potatoes and grain thoroughly on his own land before introducing to the public, and any new seeds he recommends can be depended upon as having given good results upon his farms.

WAREHOUSE B.

A. M. HOLDEN, Banker, Honeoye Falls, N. Y.

JUST A WORD ABOUT OURSELVES

First—As to our locality. We are a few miles south of Rochester in the Genesee Valley of Western New York, a most favored section for producing good, strong, vigorous seeds. Then again we are not mere dealers, but growers, and when you buy farm seeds of us you buy them direct, and do not pay profits to a half dozen middle men. While we grow a large part of the seeds we sell ourselves here in this Western New York country, a large part of the seeds are grown for us by contract on soils and under conditions most favorable for their perfect development. For instance, all of our extra early potatoes are grown five to eight hundred miles farther north than Rochester on virgin soil, and this season we are offering you early potatoes, vigorous, full of vitality, and free from blight, rot or disease. Our oats are all grown here in the valley country as is also the majority of our corn. We have our own farms, and make thorough tests in regular field culture before we offer any of our varieties to the public. We will not offer any new potatoes, corn or oats until they have proven on our own farms and under our own eyes worthy of introduction. You can buy of us in confidence, knowing you get what you expect to get and nothing else. Our seed potatoes are stored in specially constructed cold storage warehouses, buildings built by ourselves, especially for potatoes, and are absolutely frost proof. We keep these buildings at an even temperature throughout the winter, and deliver you seed stock in the spring hard and firm, full of vitality, ready to produce for you the best and most satisfactory crop. Our cleaning plant is equipped with the best milling and cleaning machinery known to the trade, and our corn and oats are sent out in such condition as to please the most exacting, careful and painstaking farmer.

1907—ANNUAL CATALOG

EDWARD F. DIBBLE, SEEDGROWER

In presenting you our 16th Annual Catalog, besides offering all the standard varieties of potatoes which we have on hand in large quantities, we offer for your careful consideration the great quartette of potatoes—Ionias, Twentieth Centuries, Manistees, and Moneymakers, all potatoes of our own introduction that made such a wonderful record on the Eden Trial Grounds in 1906, standing at the top of the list with 825 varieties in the test. These potatoes are absolutely reliable.

Our location and shipping facilities are of the best, and freight rates to points in the Middle and Eastern States are low. Honeoye Falls is 13 miles south of Rochester and on the Lehigh Valley and New York Central Railroads.

Freight rates to principal points are as follows:

	Rate	Points	15	cts.	per	100	lbs.

PRICES

are F. O. B. Honeoye Falls, N. Y. Barrels and bags free as stated.

TERMS

Strictly cash with order, except on carload lots, upon which we will make you a special price, delivered at your station.

REFERENCES

Bank of Honeoye Falls, Dun's or Bradstreet's, editors of any and all leading agricultural papers and thousands of satisfied customers.

OUR GUARANTEE

We guarantee our Seed Potatoes Northern Grown, assorted for seed purposes, and a first-class sample of the variety. Our oats and corn are thoroughly re-cleaned and screened by the best mills known to the trade, and in first-class condition for sowing.

We use all possible care in sending out all our seeds. If our customers have any complaint to make of any kind it must be made on receipt of goods to receive attention. Otherwise it will be mutually considered between the buyer and seller that the goods are satisfactory.

DIBBLE'S SEED POTATOES

The Best in the World

The most comprehensive, thorough, and accurate test of potatoes ever made was that of Rev. J. R. Lawrence on the Eden Trial Grounds, Massachusetts, in 1906.

There were 825 varieties in the test, and at great expense Mr. Lawrence gathered them not only from the various States of the Union, but from the uttermost parts of the earth. The various provinces of Canada, Manitoba, Ontario, Nova Scotia, contributed many desirable varieties. Mexico, Chile (the original home of the potato) and other South American countries sent their quota. England furnished over 100 sorts, among them the wonderful Eldorado and North Star, the potatoes that brought \$800 a pound at auction a year or two ago.

Scotland and Ireland responded nobly. Germany, France and the other European countries were ransacked for promising new sorts and standard kinds. Asia, Australia, and the Islands of the sea sent half way around the world their best spuds.

The 825 varieties were planted in one field, side by side, same fertilization and same care given to each variety, and what was the result?

Dibble's Ionia Seedling, introduced by us two years ago, outyielded everything in the lot.

Dibble's Twentieth Century, introduced by us last year, was the most blight resistant of any; and with Early Manistee and Moneymaker, all potatoes of our introduction, formed a group of four varieties that were among the best ten in point in yield. Of the rest, two were of American origin and the others from Great Britain.

This great test proves that American potatoes are the best in the world and **Dibble's Seed Potatoes the Best in America**. Read Mr. Lawrence's letter giving the report in this test which you will find on the following page.

Established 1896

J. R. LAWRENCE, Prop.

Eden Trial Grounds.

PHOTOGRAPHS OF TRIALS.

Specialties: Sweet Peas and Potatoes.

Eden Trial Grounds, North Middleboro, Mass.

Oct. 15, 1906.

Edward F. Dibble,
Dear Sir:

Have finished digging entire list of trials of potatoes, (825 varieties), and find your "Ionia Seedling" the heaviest yielder in the lot. Four varieties of your introduction--Ionia, Twentieth Century, Manistee and Moneymaker are among the first ten as to yield, all close together, and all of good quality.

The Twentieth Century is the most blight resistant sort, growing four weeks after all the others were dead, but all of your varieties are healthy, vigorous growers.

As a result of my potato trials, covering a number of years, in which I have tested over 1000 varieties, I consider Dibble's Twentieth Century and Dibble's Ionia Seedling the best round white varieties for main or late crop, Dibble's Money-maker the best long white potato, and Dibble's Early Manistee the best early, both for production and quality; in fact, out of 825 varieties tested this season your Early Manistee has without question the best eating quality of any in the lot.

Yours truly,

J. R. Lawrence.

DIBBLE'S IONIA SEEDLING

The Best in the World

Dibble's Ionia Seedling, introduced by us for the first time as a novelty three years ago, stands to-day at the head of all potatoes for yield in the world. This is the potato that came out of the Eden Trial Grounds test in Massachusetts last season, at the top of the heap.

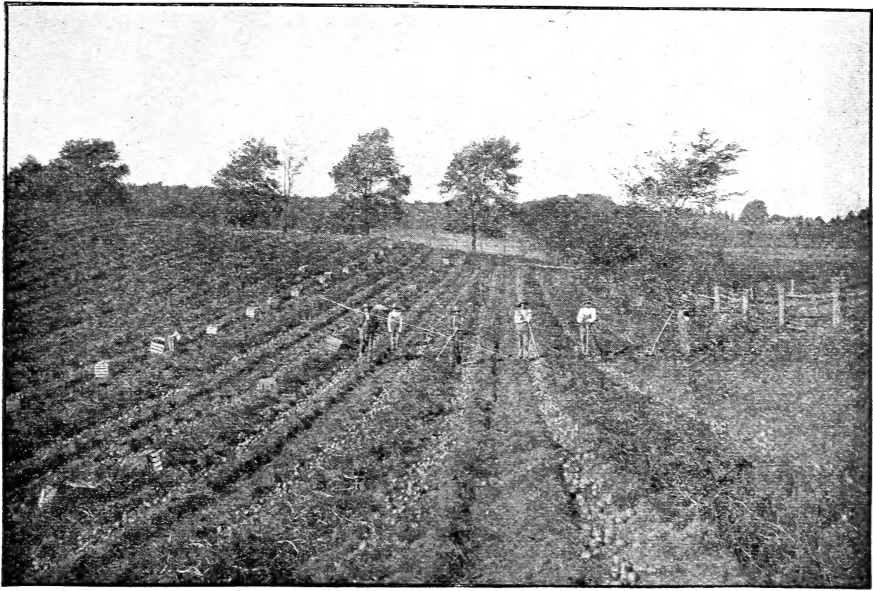

The Ionia Seedling is round in shape, slightly russet skin, very white flesh and most excellent table quality. It matures with such well known sorts as the Green Mountain and State of Maine. It is not a late potato but medium for general crop.

The foliage is very green, extremely healthy, and has never blighted with us. We recommend it to those who want a general crop potato which matures two or three weeks earlier than the late sorts, and it certainly is a good potato to grow for main crop on account of its early maturity and enormous yielding qualities. In fact, at the test made at the Eden Trial Grounds last season, 825 varieties in the test, the Ionia Seedling outyielded everything in the entire lot, and was way ahead of all the others planted, proving it to be without question *the heaviest yielding potato in the world*.

We have had such a heavy yield on our own farms and those of our growers that we have an enormous stock on hand, and can furnish them this season at a very reasonable price. Some yields have been reported to us of 500 bushels per acre, many yields of 300 to 350 bushels per acre, and one of our growers this season, on a general crop, had a yield of over 350 bushels per acre when the other varieties in the same field yielded less than half as many. This is the year to get into seed of this variety, and as we have such a large stock on hand we can make a very low price, as follows:

1 barrel, \$3.00, or 4 barrels \$10.00.

SPECIAL OFFER—1 barrel each of Ionias, Centuries, Manistees and Moneymakers for \$10.00.

A Field of Ionia Seedling Potatoes.

Litchfield Co., Conn., Nov. 12, 1906.
 Dear Sir:
 The Ionia Seedling potatoes bought of you last spring yielded 300 bushels to the acre. They did not blight or rot. Quality good.
 Respectfully,
 F. C. Chevillot.

Greene Co., Pa.
 The Ionia Seedlings were fine, and yielded 325 bushels to the acre.
 T. J. Ross.

Montgomery Co., Pa.
 Dear Sir:
 The Ionia potatoes outyielded all other varieties planted. They yielded about 450 bushels to the acre of smooth, large, merchantable potatoes.
 Yours, etc.,
 Milton G. Oberholtzer.

Bucks Co., Pa., Nov. 26, 1906.
 The Ionia Seedling potatoes received from you were free from blight, and yielded about 75 bushels per acre more than other varieties in the same field.
 A. G. Walton.

Green Co., N. Y., Nov. 8, 1906.
 Ionia potatoes yielded 200 bushels per acre, or about one-fourth more than any other kind I planted. No blight.
 H. M. Hankinson.

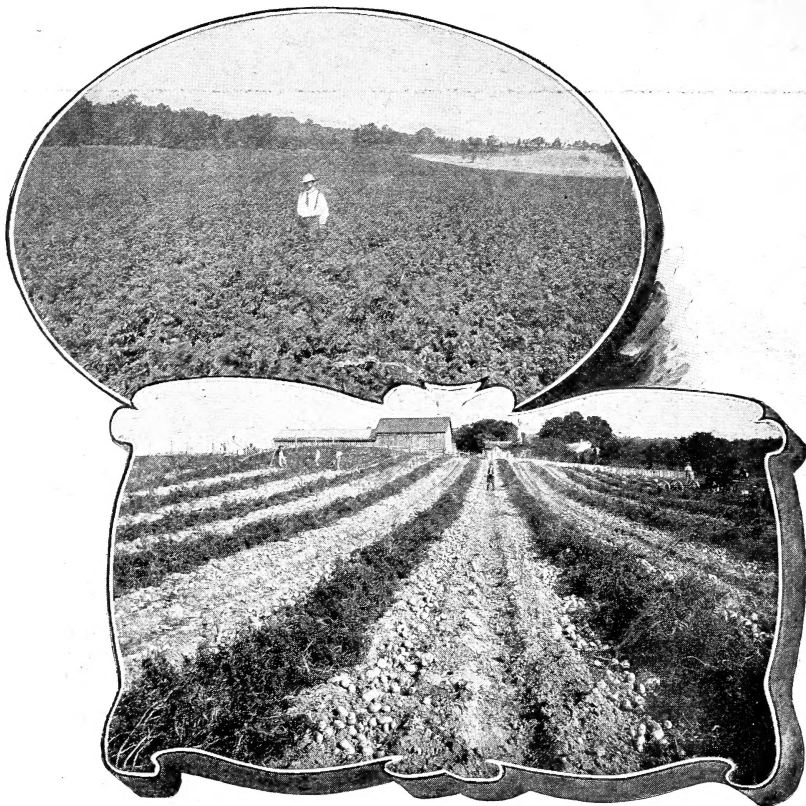

Ontario Co.
 Edward F. Dibble, Seedgrower:
 Gentlemen: From the four acres of Ionia Seedlings that I have just delivered to you we had a most satisfactory yield of over 350 bushels per acre.
 Samuel Wallace.

Cuyahoga Co., Ohio, Nov. 6, 1906.
 Dear Sir:
 The Ionia Seedling did well in yield and quality. It yielded over 250 bushels per acre and did not blight.
 Edward B. Cerney.

Cumberland Co., Pa., Nov. 18, 1906.
 Dear Sir:
 The Ionia Seedling potatoes I got of you last spring did well, yielding 235 bushels to the acre; all good large tubers and no blight.
 Henry J. Duke.

Cortland Co., N. Y.
 They averaged over 300 bushels per acre, one hill weighed 7 lbs. 2 oz. common culture.
 W. J. Shaver.

Worcester Co., Mass.
 I planted four acres of potatoes, six varieties in all, and the Ionia Seedlings yielded nearly double any of them. They are the best potato in every way that I ever planted. No blight or rot.
 J. H. Burton.

Twentieth Century, 350 Bushels per acre.

DIBBLE'S TWENTIETH CENTURY

Dibble's Twentieth Century is the strongest growing and most vigorous potato of our time.

The Twentieth Century is different from all other potatoes. It grows from start to finish in spite of drought or continuous rains, the bugs do not seem to touch the foliage, and careful examinations from time to time through the season failed to show a single blighted leaf. At harvest the crop is a brilliant fulfillment of the promise held out during the growing season.

The tubers are white, round to oblong in shape, slightly flattened, with white flesh of splendid quality.

The vines are the most luxuriant of any potato. With us and on the fields of scores of our customers they have proven absolutely blight proof.

At the Eden Trial Grounds last year, 825 varieties in the test, *Twentieth Century* was the strongest grower in the lot, staying green four weeks after the others were dead, and was among the best ten in point of yield.

As to yield in larger acreages one field of $2\frac{1}{4}$ acres of Twentieth Centuries produced over 700 bushels, and this present season here in Western New York, on one of the Dibble farms, a crop of 4,670 bushels from 18 acres. This field was not sprayed nor was there any insecticide used of any kind. You will find letters testimonial from various customers speaking in the highest of terms of the blight resisting and wonderful yielding qualities of this remarkable potato.

The results obtained from another year's growing of the Twentieth Century prove that every farmer who is growing late potatoes as a main crop should give the Twentieth Century a thorough test. This potato is one of our own introduction, and you should secure seed from us and have it pure. The record it has made has created an enormous demand for this new variety, and many spurious Twentieth Centuries will be palmed off on an unsuspecting public by unscrupulous dealers. Therefore the moral is, Buy your Twentieth Centuries of headquarters.

We offer you this potato at \$3.00 per single barrel or 4 barrels for \$10.00.

SPECIAL OFFER—1 barrel each of Twentieth Centuries, Ionias, Manistees and Moneymakers for \$10.00.

THE TWENTIETH CENTURY

The Strongest Growing, Most Blight Resistant Potato of Our Time.

Summit Co., Ohio, Nov. 5, 1906.

The Twentieth Century potatoes yielded over 300 bushels per acre. They grew a very strong vine. The Early Manistees are all you claim for them, fine large potatoes and great yielders.

C. O. Mentzer.

Ontario Agricultural College,
Guelph, Can., Oct. 22, 1906.

Mr. Edward F. Dibble,
Honeoye Falls, N. Y.

Dear Sir:

Out of 118 varieties of potatoes on our trial grounds but six of the lot showed no indications whatever of rot and the Twentieth Century was one of the six. Twentieth Century produced 213 bushels per acre and the potatoes look well.

J. Buchanan, B. S. A.

Ottawa Co., Ohio, Nov. 5, 1906

The Twentieth Century, Early Manistee and Ionia did not blight. Twentieth Century is the best of the three.

A. C. Beckstein.

Herkimer Co., N. Y., Nov. 6, 1906.

The Twentieth Centuries were the best of all the varieties I had in yield and general appearance, keeping green until killed by frost.

V. Phillips.

Providence Co., R. I.

I harvested 85 bushels of good sound stock from the Twentieth Century potatoes bought of you last spring. They are blight proof. All my other potatoes blighted.

Louis Girouard.

Ontario Co., N. Y.

Dear Sir:

I had over 700 bushels of Twentieth Century potatoes on $2\frac{3}{4}$ acres. They are the best variety I have ever grown in my life time of raising potatoes. I have raised large yields before, but this beats them all.

Antonio Merkel.

Lime Rock, R. I., Oct. 22, 1906.

The Twentieth Century potatoes were the best I had. They did not blight, and the yield was twice as much to the row as other kinds on either side.

Isaac Campbell.

Oxford Co., Me., Oct. 20, 1906.

I have just finished digging Twentieth Century potatoes and the yield is 288 bushels per acre. The blight killed the vines of the other varieties on my farm, but the Twentieth Century stayed green four weeks longer.

Wm. H. Porter.

Madison Co., N. Y., Oct. 15, 1906.

Twentieth Century potatoes yielded 200 bushels per acre. Other potatoes yielded 100 bushels. Quality good.

Jas. A. Moore.

Bennington Co., Vt., Oct. 18, 1906.

I planted the Twentieth Century potatoes on a steep side hill, rather poor, and we had a severe drought here but they stayed perfectly green until late. They were decidedly better than other varieties grown near which blighted.

W. H. Stoffard.

Chester Co., Pa., Oct. 17, 1906.

The Twentieth Century potatoes did not blight. Others alongside did. The yield is fully one-third more than other standard varieties alongside. They are certainly an up-to-date potato.

P. T. Vogle.

Hamilton Co., N. Y., Oct. 15, 1906.

I bought one bushel of Twentieth Century potatoes from you last spring. I sold 10 lbs. and from the 50 lbs. which I planted raised over 23 bushels and from other varieties planted an average of about 10 bushels to one bushel of seed. The Twentieth Centuries were blight proof also, and after all the others were blighted, they stayed green and nice.

Mrs. E. Mead.

Hampshire Co., Mass., Nov. 1, 1906.

The Twentieth Century potatoes were blight proof. The vines were green two or three weeks after the others were all dead.

S. R. Puffer.

Columbiana Co., Ohio, Oct. 17, 1906.

The Twentieth Century was the greenest and strongest grower of 15 different kinds. Quality is A1.

Geo. G. Barnes.

Northampton Co., Pa., Oct. 18, 1906.

The Twentieth Century potatoes proved blight proof and were green up to the time of digging whereas other varieties were dead three weeks.

Geo. W. Coleman.

Clarion Co., Pa., Oct. 22, 1906.

Twentieth Centuries bought from you are dandies. Planted one bushel and got twenty-five. They did not blight.

Frank Rex.

Glenburnie Farm,

Berkshire Co., Mass., Oct. 24, 1906.

Dear Sir:

Twentieth Century potatoes yielded fully 200 bu. per acre and not more than 4 or 5 bu. of small ones in the lot.

H. C. Haven.

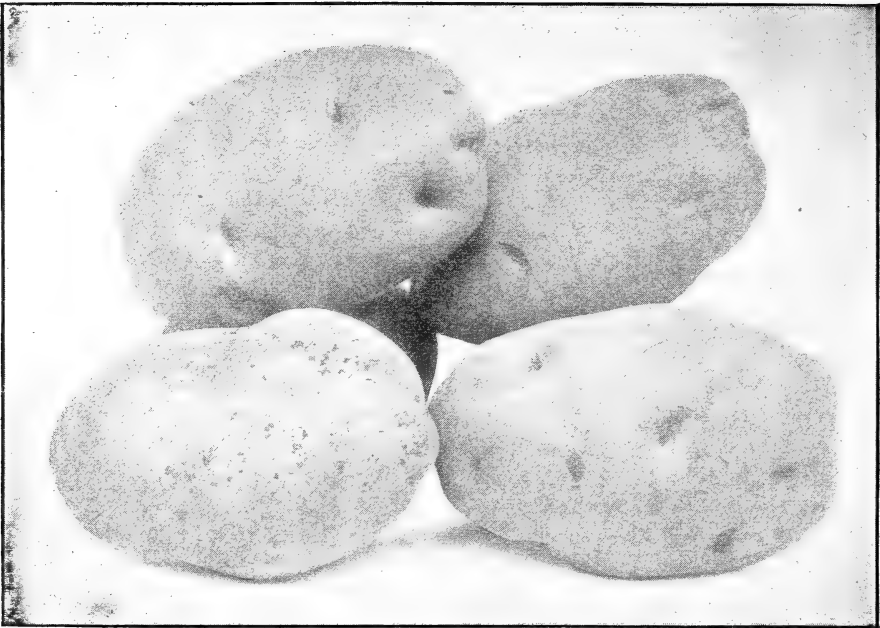

Luzerne Co., Pa., Oct. 20, 1906.

Edward F. Dibble,

Dear Sir:

Those Twentieth Century potatoes I bought from you last spring did well. They were green until the last of Sept. Other varieties died two or three weeks before, planted at the same time side by side. Twentieth Century yielded best.

Andrew Wolf.

DIBBLE'S EARLY MANISTEE

Dibble's Early Manistee was introduced by us two years ago as the heaviest yielding early potato since the introduction of the Early Rose. The Manistee is a seedling of the Early Rose, round to oblong in shape, slightly flattened, skin light pink, eyes near the surface, flesh pure white and a table quality that is absolutely faultless. Vines are luxuriant in growth and have never blighted with us. Scores of our customers pronounce it absolutely blight proof. Our Early Manistee is another of the potatoes of our introduction that was among the best ten as to point of yield in the test at the Eden Trial Grounds this last year, and was pronounced by Mr. Lawrence, who carried on the trial grounds, as the best eating potato of any in the lot.

This conclusively proves that for an early potato for main crop the Early Manistee is the best in the world. Any number of our customers report yields of 300 to 400 bushels per acre and yields twice as large as those obtained from other early varieties planted alongside.

Favorable crop conditions have given us large stocks this season and we offer Manistees at \$3.00 per barrel or 4 barrels for \$10.00.

SPECIAL OFFER—1 barrel each of Early Manistees, Ionias, Centuries and Money-makers for \$10.00.

Dominion of Canada
Central Experimental Farm.
Edward F. Dibble,
Honeoye Falls, N. Y.

Dear Sir: Your letter of recent date received, in which you ask the results which we obtained from the Manistee potatoes which we received from you. The Manistee potato yielded at the rate of 422 bushels per acre.

Yours truly,
W. T. Macoun,
Horticulturist.

Lime Rock, Conn., Nov. 5, 1906.

I consider your Manistee a grand potato. They are blight proof, and I find they turned out just as you advertised in every way.

Wm. Stone.

Seneca Co., N. Y.

I planted the Early Manistees alongside of Early Fortune and Early Triumph, and the Early Manistees outyielded the others nearly three to one.

Lewis A. Morgan.

Ontario Co., N. Y.
The Early Manistees yielded exceptionally well, over 300 bushels per acre.

Maurice E. Warner.

Goshen, N. Y., Nov. 10, 1906.

The Manistee is all right. The quality is fine, and the yield was double that of other varieties side by side in the same field.

Thos. McGraw.

Hartford Co., Conn.
The Early Manistee yielded a good 300 bushels, common culture, to the acre.

C. B. Weir.

Bucks Co., Pa.
The Early Manistees yielded double the amount side by side of other kinds of potatoes planted in the same field.

O. C. Keeper.

Toms River, N. J., Nov. 9, 1906.

Your Early Manistees were very productive, fine quality and blight proof. A very valuable potato.

R. Rebhan.

DIBBLE'S MONEYMAKER

Dibble's Moneymaker is the handsomest and most productive long white potato ever introduced. A number of years ago the Moneymaker was introduced by us as the best long late white potato. We have had no reason from time of introduction to the present to change our opinion of the Moneymaker as the best of its type. We know of no other long, late variety that has given such universal satisfaction wherever planted as has the Moneymaker, and although it has been grown largely in many sections, it has not deteriorated as to yield or quality, but is to-day as strong and vigorous as when it was introduced.

At the Eden Trial Grounds last year the Moneymaker was one of the ten best varieties as to point of yield out of 825 sorts in the test, and is pronounced by Mr. Lawrence, the proprietor of the Trial Grounds, as the best long white potato.

The foliage of the Moneymaker is very heavy, and it is a remarkably quick grower, resisting drought and blight to a wonderful degree. We recommend it as the best long white variety.

We have a good stock on hand and offer Moneymakers in barrel lots at \$3.00 per barrel or 4 barrels for \$10. 00.

SPECIAL OFFER—I barrel each of Moneymakers, Ionias, Centuries and Manistees for \$10.00.

Delaware, N. Y., Nov. 13, 1906.

Dear Sir:

The potatoes have proven blight proof.

D. C. Angle.
Monmouth Co., N. J.

Dear Sir:

The crop of potatoes which I raised from your seed has been one of the best crops I ever had.

Yours truly,
Jonathan I. Holmes.

Port Allegany, Pa., Nov. 19, 1906.

Edward F. Dibble, Seedgrower.

Dear Sir:

I never had such nice potatoes as I raised this year from seed purchased of you. They are all you claim them to be.

Lewis Tilley.

McDonald, Pa., Nov. 8, 1906.

Your potatoes yielded double the amount of others planted alongside and were clear of blight.

R. W. Vermillion.
Middlesex Co., N. J.

Edward F. Dibble:

Dear Sir: The potatoes I raised from your seed turned out better than any I had.

A. S. Perrine.
Westchester Co., N. Y.

Dear Sir:

I wish to say that the seed potatoes which I bought from you have given excellent results. I wish to get price on 100 bbls. to be shipped in November.

Yours truly,
B. Collins.

==1907==

Price List of Seed Potatoes

While we have devoted several full pages to the consideration of the four potatoes of our own introduction that are now conceded to be the *best in the world*, still we realize that there is a good demand for the old standard sorts that have been in cultivation so many years as to have proven desirable above other varieties in certain localities. Therefore we have, in our warehouses at Honeoye Falls, full stocks of all the leading varietiest and all new sorts of merit. We have not given full descriptions of these, but you will find them briefly described and quoted below. We trust to have your valued order.

Prices quoted are for immediate acceptance subject to change without notice. Shipment to be made in the spring after danger of frost is past or as you direct.

New double headed barrels free. Make out your order *to-day* and send it to us. We will hold the stock for you till safe to ship.

If ordered in sacks, 10 cents less per package on all varieties.

Special prices on club or neighborhood orders of from 10 to 100 barrels.

Special prices on car lots delivered to your station. Write for them to-day.

THE GOLDEN HARVEST OAT

Introduced by us last season as a comparatively new variety in America, coming from England a couple of years ago, where it had the reputation of being the best variety of the British Isles.

The straw of the Golden Harvest Oat is extra long and very heavy, free from rust and extremely stiff, being, in fact, the strongest growing straw of any variety of oats with which we are acquainted.

It is late, however, not so early as the Twentieth Century. The heads are extra long, the grain packed in close together, and will not shell, even if allowed to get dead ripe. The grain is of a golden straw color and of good weight.

We recommend the Golden Harvest Oat as a good late, main crop variety and an ideal sort for home consumption.

Price, 1 bushel, \$1.00; 2½ bushel bag, \$1.75; 10 bushels, \$6.50. Bags or sacks free.

Sullivan, N. H., Oct. 27, 1906.

We were well satisfied with the Golden Harvest oats. They were free from foul seed. Not a weed in the field.

Yours truly,

Bert E. Smith.

Lowman, N. Y., Oct. 20, 1906.

The Golden Harvest oats did well. Yield 65 bushels per acre, other oats 35 bushels per acre. Poor oat year here.

E. Roe.

Leechburg, Pa., Oct. 19, 1906.

The Golden Harvest and Twentieth Century oats purchased from you were well cleaned and stood up well. They made a good yield. We will want enough to sow twenty acres next spring.

John C. Hawk.

Swedish Select or Washington Oats

Brought originally from Russia by Prof. Carleton of the Agricultural Department at Washington, and described by him as probably the best American oat.

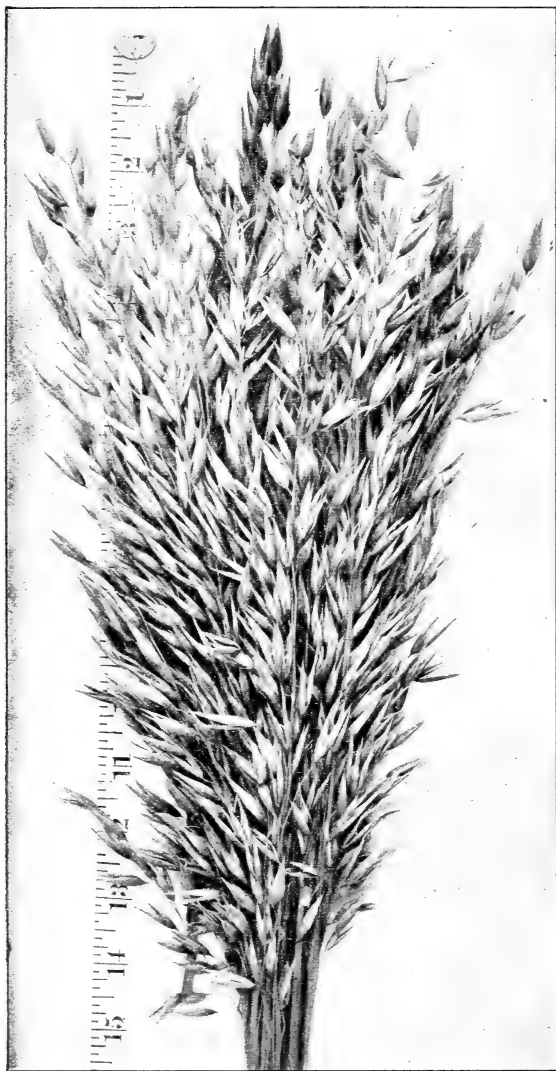

The Swedish Select or Washington Oats are thick, plump and good yielders. Our stock is pure and clean, and to those who want this variety we can furnish several thousand bushels grown on our own farms that we can recommend as being straight in every sense of the word.

The Swedish Select does not grow a tall straw, but stools freely and is very productive. We consider it an extremely good variety for poor soil.

Price, 1 bushel, \$1.00; 2½ bushel bag, \$1.75; 10 bushels, \$6.50. Sacks free.

Special price on quantities.

TWENTIETH CENTURY OAT

These oats grow a tall, stiff, rust proof straw and do not lodge. They are extremely early, in fact the earliest oat grown. They produce as a rule, under favorable crop conditions two or three oats per chaff, which accounts for their yielding so heavily. The average weight of the grain is from 34 to 40 lbs. per bushel. We grow on our own land over 100 acres per year, and these are thoroughly hand weeded while growing so as to keep out all foul weed seeds. Then before sending out our oats to customers they are re-cleaned and milled twice by the best machinery known to the trade, and we believe we are sending out as clean a sample of oats as can be produced. We wish you to notice that several customers writing in to us speak of our seeds as being most thoroughly re-cleaned and free from all foul seeds, etc. We claim for the Twentieth Century briefly: 1st, the earliest variety grown; 2nd, the variety that grows the tallest, stiffest straw; 3rd, it has proven rust proof; 4th, enormously productive. We trust you will favor us with a liberal order for the Twentieth Century, and we hope to be able to fill all orders, as we have a large stock on hand, but advise you to order at once. We have made our prices extremely low, as follows:

Bushel \$1.00; 2½ bu. bag, \$1.75; 10 bu. lots, \$6.50. Sacks free. Special price on large quantities.

The Twentieth Century oat has given general satisfaction wherever grown and during the last two seasons we have sold it, our sales have run over 25,000 bu., and we have yet to find a dissatisfied customer.

Yields of 80 to 100 bu. are not uncommon and many of our customers claim crops producing far more than that.

Read these brief extracts from our customers' letters.

Livingston Co., N. Y.

"From four acres of land we threshed this season 440 bu. of oats thresher's measure."

Levi Simons.

Allegany Co., N. Y.

"The Twentieth Century oats did fine. Threshed 68 bags from 2 bu. sowing. Average weight about 80 lbs. to the bag." W. H. Swarts.

Arundel Co., Md.

"My oats were the admiration of all who saw them. They stood fully four feet tall, and the heads would measure twelve inches in length."

Wm. D. Klee.

Oswego Co., N. Y.

Wilson Bros.
Allegheny Co., Pa.

"The oats stood five feet high. In regard to yield, it was double that of the other kinds we have here. Weigh nearly 40 lbs. to the bushel."

Allison L. Heile.

"I sowed them on precisely one acre of ground by the land-measure on my drill. That acre produced very nearly 100 bu. of fine oats."

Livingston Co., N. Y.

Frank Warner.
Allegheny Co., N. Y.

"The oats grew big straw, stood up well and did not rust. They were two weeks earlier than our other oats."

Geo. Rogers.

"I am much pleased with them. There was not a bit of rust, smut or blight on them."

Broome Co., N. Y.

C. M. Howard.

Monroe Co., N. Y.

"From the 26 acres of Twentieth Century oats that we let you have for seed this season, we had a total yield of over 2,000 bushels."

John E. Dann.

MAMMOTH YELLOW FLINT CORN

Dibble's Mammoth Eight Rowed Early Yellow Flint Corn is the best Flint corn either for crop or silo in cultivation. It is the largest variety grown. The stalks average 8 to 10 feet in height, each stalk carrying from one to three ears. It leaves profusely, nearly to the ground, and both the leaves and stalks are sweet. Then when we come to talk of the grain, the Mammoth Yellow Flint produces more and longer ears than does any other variety. The ears average from 10 to 18 inches in length.

Another remarkable feature of this corn is that it is early, being fully ripe and ready for the knife within 100 days from date of planting. Summing up the good qualities of this corn will say: First, that it is the earliest field corn grown. Secondly, it is the largest growing Flint corn in cultivation, as far as growth of stalks and leaves are concerned. Third, it grows larger ears and more of them than any other variety in cultivation. Fourth, the entire plant, stalks and leaves are sweet, and stock will eat this fodder closer, either in the form of ensilage or dry fodder, than the stalks of any other corn grown with the exception of the sweet corn. All our stock is grown from carefully selected seed. The seed we furnish our customers is from hand-picked ears ten inches in length or over, thoroughly dry and cured before selling.

Four customers say in writing to us about their crops:

"220 tons Ensilage on 10 acres."

"243 bushels from 1 peck planted."

1 bushel, \$1.75; 2 bushel bag, \$2.50; 10 bushels \$11.00; bags free.

All our corn is tested and we do not send out any corn that germinates less than 90 per cent. and at least three-fourths of our corn tests 95 to 98 per cent.

See testimonials.

Madison Co., N. Y., Oct. 16, 1906.

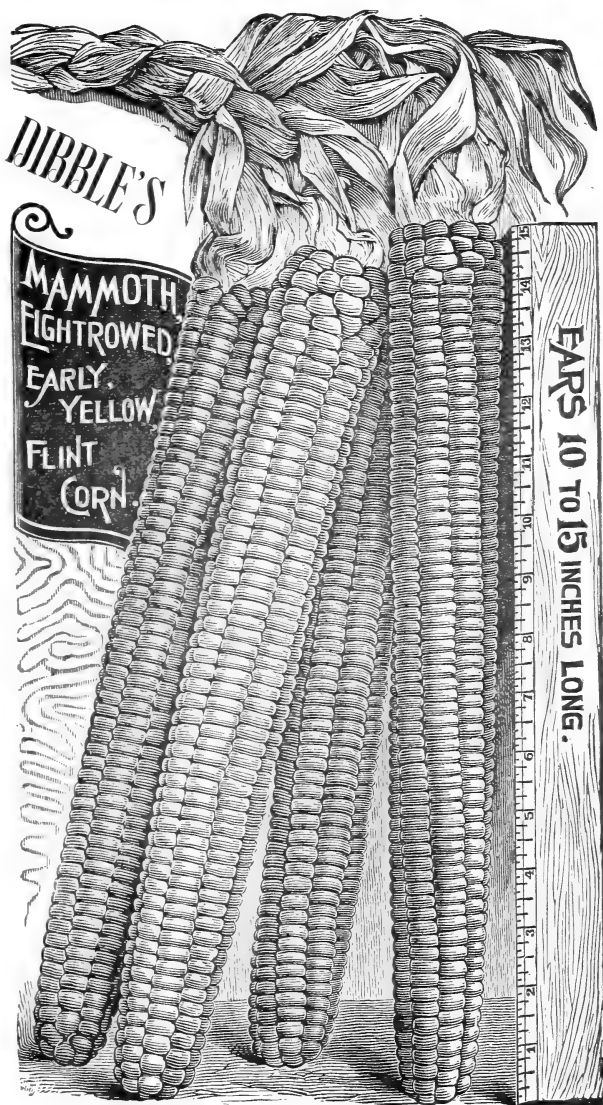

We have raised the finest crop of corn ever grown on our farm. Every kernel grew of seed bought of you. The stalks average 12 feet high. We husked the crop. The ears average 14 inches long and yield 135 bushels per acre with no soft corn. Your Mammoth Yellow Flint is the kind to raise.

J. H. WILSON.

Wyoming Co., N. Y., Oct. 22, 1906.

The Mammoth Yellow Flint corn planted after the first of June, sown with a grain drill, grew 10 feet high, ears 11 or 12 inches long, scarcely any under, and some 14 or 15 inches long. It ripened well. As for yield, 125 bushels per acre.

M. C. EVANS.

MAMMOTH YELLOW FLINT.

Best in the World.

"When the Corn is in the Shock."

Montgomery Co., N. Y.

Dear Sir: I planted two bushels of your Mammoth Eight Rowed Yellow Flint Corn last spring, and have just finished harvesting a very satisfactory crop. I planted 2 bushels on six acres and got 800 bushels of ear corn fine and ripe, very long ears, big kernels and thin cob. The stalks range from 6 to 8 ft. in height and of fine quality.

Yours truly,
John P. A. Failing.

Sussex, N. J., Nov. 5, 1906.

Your seed corn is very satisfactory. I tested a sample and 100 per cent. germinated.

C. J. Stanaback.

Wyoming Co., N. Y., Oct. 22, 1906.

I like the Mammoth Yellow Flint corn I had from you very much. It germinated well. Stalks average 9 feet, ears 14 inches, yield 125 bushels per acre.

E. D. Cooper.

Hampshire Co., Mass., Nov. 19, 1906.

Mr. Dibble,
Dear Sir:

Mammoth Yellow Flint corn yielded 100 bushels per acre of good sound corn, ears from 10 to 13 inches long. It is the best Flint corn I ever planted.

Chas. H. Hooker.

Niagara Co., N. Y., Oct. 18, 1906.

The Eighty Day Yellow Dent corn was O. K., germinated all right, grew ten feet high on the average, and I had one acre that husked 200 bushels. It is good enough for

Yours truly,
Clark H. Carmer.

Allegheny Co., N. Y., Nov. 9, 1906.

Mammoth Yellow Flint corn did finely here. Stalks grew better than 10 ft. high, ears long, and yield over 100 bu. per acre.

L. D. Bennett.

St. Lawrence Co., N. Y., Oct. 16, 1906.

Mammoth Yellow Flint corn is all right. Planted May 5, ripe Sept. 6. Stalks 10 ft. high, ears 10 to 14 in. long.

Yours respectfully,
W. H. Adair.

Middlesex Co., Mass., Oct. 25, 1905.

Edward F. Dibble:

Dear Sir: Your Mammoth Yellow Flint corn planted June 1st, harvested the first of September. Height of stalks 9 ft. 10 in. Yield 200 bushels to the acre. Think it very well adapted to this latitude.

G. W. Adams.

Edward F. Dibble, Seed Grower:

Dear Sir: We have just finished husking a two acre lot of corn, raised from your Mammoth Yellow Flint Seed corn, and the yield has been so good that I can not keep it to myself. We put into our corn crib out of this two acre lot, 460 bushels of very fine corn.

H. A. Medlong.

Franklin Co., Vt., Sept. 29, 1905.

Gents: The Mammoth Yellow Corn did splendidly in a very poor year for corn. Probably have the best field in the county. The corn formed early, as we are right on the Canada line, and it has been in shock over a week well matured.

Sincerely,
E. J. Ranslow.

Lawton Station, N. Y., Oct. 23, 1906.

The Eighty Day Yellow Dent corn did well. Planted June 20, it was ripe enough to put in the silo. Mammoth Yellow Flint is yielding over 100 bushels per acre, ears 12 to 14 inches long.

Geo. W. Clark.

Orator F. Woodward, of LeRoy, N. Y., writes: "The Mammoth Yellow eight-rowed Flint corn drilled for ensilage made a yield of fully 20 tons per acre or over 200 tons from the 10 acres planted."

Bradford Co., Pa., Oct. 20, 1906.

The germination of seed corn purchased of you must have been nearly perfect judging from the stand we had.

J. D. Pierce.

Hartford Co., Conn., Oct. 16, 1906.

Mammoth Yellow Flint corn came up well. Never had better. 9 ft. high and ears average 14 in. long.

Edward R. Barnard.

Dibble's Improved Early Leaming Corn

Is the best Dent Corn for farmers in the Middle States who desire to raise the largest possible amount of stalks and corn that will get ripe in this latitude so as to make good ensilage. The Improved Leaming will mature in from 100 to 110 days of good corn weather.

The stalks average from ten, twelve to fourteen feet in height, and the ears are large and numerous. By careful cultivation we can grow twenty to thirty tons of the best ensilage per acre. We recommend this variety as the best of the large Dents for the Middle and New England States.

Price, 1 bushel, \$1.75; 2 bushel bag, \$2.50; \$10 bushels, \$11.00. New bags free.

I have planted three different kinds of the Dent corn, and this did the best for me. I drilled it the 12th day of May. It grew 10 to 12 feet high. I commenced filling my silo Sept. 18th. It is 12 x 13 feet 24 feet high, and it did not take quite 4 acres to fill it, and it was a week or ten days earlier than any other silo corn around here.

Yours truly, BENJ. F. GOULD.

The corn did well with us. We had corn from 12 to 15 feet high with good ears. We want some more this spring if you have as good corn as you had last spring.

Montgomery Co., N. Y.

James C. Thompson.

Tompkins Co., Oct. 16, 1905.

Dear Sir:

I am well pleased with the Leaming Corn. Planted it May 9th, cut it Sept. 25th. It was just in prime order for the silo. I had four acres of it, and think it would average 12 ft. The four acres filled a silo 12x13 ft. 24 ft. high after three days stand.

Yours truly,

C. F. Benson.

Gouverneur, N. Y., Oct. 16, 1906.

Mr. Edward F. Dibble:

The Improved Early Leaming corn I bought of you surpasses any corn I have ever seen for the silo. It was fully 14 feet high on the average, with stalks 17 feet and over occasionally. Ears matured early. Large kernels and small cob, cob well covered at ends. Will order more next season.

Yours sincerely,

A. C. Turnbull.

East Worcester, Mass., Oct. 16, 1906.

We are well pleased with the corn. 95 per cent. of it grew. The stalks averaged 11 feet high. After filling our silo, we husked the rest and there were two ears a foot long to a stalk.

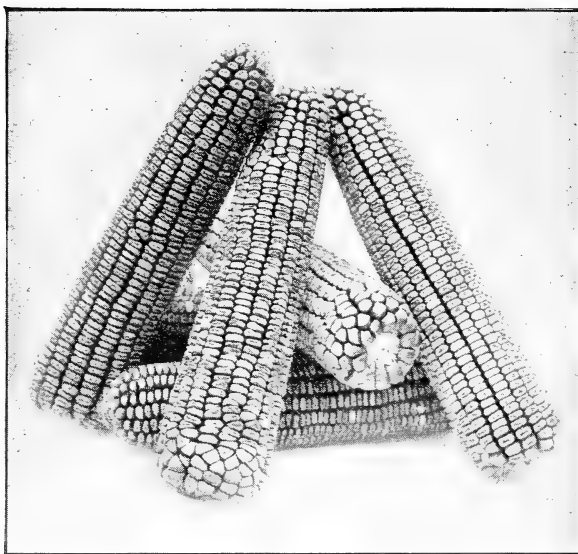

Wm. Rury.

Allegany Co., N. Y.

The Improved Leaming gave good results both on the river and on the hill land which was used exclusively for ensilage. The corn grew very large and well eared. The corn stood 12½ to 13 feet in height.

Wm. P. Brooks.

Eighty Day Yellow Dent Corn.

Eighty Day Yellow Dent corn is the earliest yellow Dent corn suitable for the Middle and New England States. On our own farms here in Western New York, Eighty Day Dent corn planted from May 10 to 20 has been thoroughly ripe and ready to harvest by Sept. 1, and in some sections we have received reports of this corn being thoroughly ripe in eighty days from planting.

This variety is similar to the Pride of the North, but the stalks are taller and ears are larger; it is more productive and a week or ten days earlier.

We recommend this as the best early Dent corn with which we are acquainted, either for the crop or for silo.

Price 1 bushel \$1.75; 2 bushel bag \$3.00; 10 bushels \$12.50.

Corfu, N. Y., Oct. 17, 1906.
Your Eighty Day Yellow Dent corn is all that you claim for it. Will want some more next spring.

W. T. Bunnell.

Chautauqua Co., N. Y.

Dear Sir:

99 per cent. of the corn grew, and averaged about 11 feet in height, and every stalk has a nice ear on it. I used it for the silo, and it makes a nice ensilage.

Yours truly,

L. W. Hollister.

Brown Co., S. D., Oct. 16, 1905.
Dear Sir: The Eighty Day Dent grew 9 ft. tall and a good stand. Had three kinds in, and like it the best.

J. H. Bockler.

St. Lawrence Co., N. Y.

The Eighty Day Dent corn was very fine, and I think every kernel grew. Corn was heavily eared. Had a fine crop of potatoes from seed purchased of you.

Arthur Freeman.

CLOVER AND GRASS SEEDS--1906 CROP

Best Cotton Bags, 20 Cents Each

We pay particular attention to the selection of high grade, extra clean Clover, Timothy and other Grass Seeds. We use on our own farms the best seeds obtainable, regardless of cost. Our grass seeds are clean and thoroughly tested, so as to have a superior quality—a superior quality only. Purchasers may rely upon us that we have put forth our best exertions to furnish grass and clover seeds pure and free from noxious weeds. We do not quote any prices, as prices fluctuate more or less on this class of seeds, but if you will send us a list of what you want in this line we will furnish you samples and very lowest quotations prevailing at the time we receive your letter.

Red Medium,
Mammoth Sapling Clover, English Clover
Alsike, or Swedish, (*Trifolium hybridum*)
White Dutch Clover (*Trifolium repens*)
Lucerne or Alfalfa, (*Medicago Sativa*)
Timothy, (*Phleum Pratense*)
Meadow Fescue or English Blue Grass,
(*Festuca Pratensis*)

Kentucky Blue Grass, Fancy Clean,
(*Poa Pratensis*)
Orchard, (*Dactylis glomerata*)
Red Top, (*Agrostis Vulgaris*)
Hungarian Grass,
Improved German, or Golden Wonder Millet
Dwarf Essex Rape
Canada Field Peas

Do You Know

That New York State produces as an average crop twice as many potatoes as any other state in the Union?

That 1-2 of the potatoes raised in New York State are grown in a half dozen counties in Western New York?

That Monroe county, the first county in the state in the value of its agricultural products, is one of the six?

That Mendon Township, Monroe county (of which Honeoye Falls is the market center) produces more potatoes than any other town in the county?

That the Seed Warehouses of Edward F. Dibble Seed-grower, with capacity of 54,000 bushels of Seed Potatoes and thousands of bushels of Seed Grain, are located at Honeoye Falls in the heart of one of the most productive sections of farming land in the world?

That Edward F. Dibble owns four farms of about a thousand acres near Honeoye Falls devoted to seed growing and general farming?

That Edward F. Dibble Seedgrower sells the BEST SEED POTATOES IN THE WORLD at right prices, at prices you can afford to pay?

WHY? Because the potatoes are sold direct to the consumer by the grower. Just one profit and that a small one.

THEREFORE Buy your Seed Potatoes from
Headquarters for Farm Seeds.

DIBBLE'S SEED POTATOES

The Best on Earth

There is but one "Best," and we have ample proof that Dibble's Seed Potatoes, grown in the cold North, produce larger crops of better quality than from any other source.

Our Seed Potatoes are grown on land that is adapted to grow the different varieties at their best, then they are stored in our own Storage Building kept at a temperature of 36 to 40 degrees, and carefully assorted before being packed in new barrels or sacks and shipped to you.

As a result of this careful, intelligent method of producing high class seeds, our potatoes are full of vigor, firm, sound, healthy, and capable of producing immense crops wherever grown.

We have hundreds of testimonials from our customers stating in no uncertain terms what Dibble's Seed Potatoes have done for them. A few of these letters are printed below. Will you read them?

These are the kind of crops raised by those who plant Dibble's Seeds.

Washington Co., Md.
The Twentieth Century potatoes purchased of you last spring proved entirely blight proof, planted in a field with five other varieties, all of which blighted. The vines during the whole growing season were vigorous and healthy. Yield very good of fine smooth uniform tubers of excellent quality.

Yours, etc.,

Ernest L. Yourtee.

Columbiana Co., Ohio, Nov. 8, 1906.
The yield from your Ionia and Manistee was much better than I expected, and the quality is all that any one could wish for. Will cook in eighteen or twenty minutes, breaking open white and mealy. Success to you.

H. S. Adams.

Crawford Co., Pa., Nov. 5, 1906.
From the Early Manistees I dug 60 bushels of fine potatoes. The blight did not affect them, and the yield is better than my other varieties.

Wm. F. McDaniel.

Clinton Co., N. Y., Oct. 15, 1906.
I am pleased with those Twentieth Century potatoes. They showed no signs of blight. Every other variety blighted after five sprayings.

Wm. Bremmen.

Cheshire Co., N. H., Oct. 18, 1906.
The Twentieth Century potatoes were blight proof and good yielders. All my neighbors' potatoes blighted early and they had a poor yield.

Yours truly,

Elisha A. Smith.

Shrewsbury, N. J., Nov. 3, 1906.
Dear Sir:

Both the Manistees and Ionias are very satisfactory, the latter the larger yielder. Other varieties blighted; vines died early.

Yours truly,

F. C. VanVliet.

Oneida Co., N. Y., Oct. 15, 1906.
I am very much pleased with the Ionia Seedling and Twentieth Century potatoes received from you last spring. They both remained green long after the other varieties had died.

Gaylord D. Ward.

EDEN TRIAL GROUNDS.
North Middleboro, Mass., Aug. 13, 1906.
Mr. Edward F. Dibble,
Honeoye Falls, N. Y.

Dear Sir:

Twentieth Century potato is the only thing showing green vines in the largest collection of potatoes in the world, eight hundred and twenty-five varieties (825 standard sorts), including all the old world's best flat beside it with blight.

Yours truly,

J. R. Lawrence.

Schoharie Co., N. Y.
Dear Sir: The Manistees and Ionia Seedlings raised from your seed purchased last spring are all you claim them to be, free from scab and rot.

Yours truly,

Chas. J. Settle.

Steuben Co., N. Y.
The Ionia Seedlings are an excellent variety. They yielded 200 bushels per acre on a side hill of fine extra white tubers.

C. D. Pritting.

S. M. Jordon of Maplewood, N. Y., says: "The Mammoth Yellow Flint corn bought of you last spring is simply immense. I cannot say too much in its praise. It surprises me to see such corn growing in this locality. My neighbors are unanimous in saying the same, and they wish they had planted some. You are doing a world of good by sending out such valuable seed, and if the farmers only knew the value of your seeds you could not grow enough to supply half of them."

Will Co., Ill.

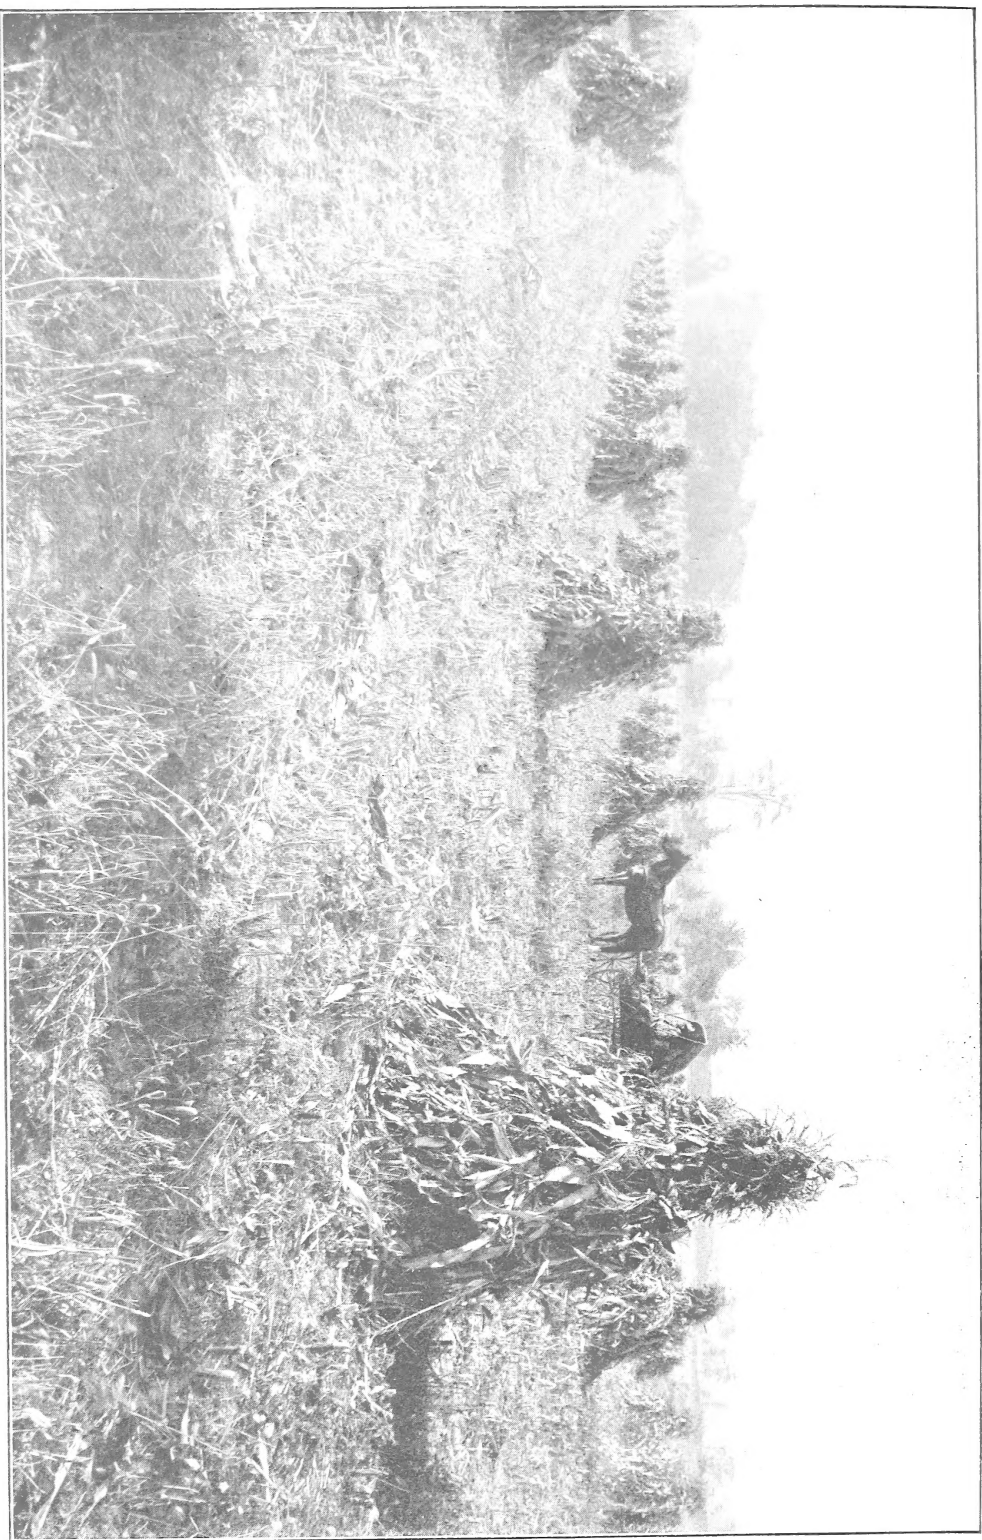

Edward F. Dibble:

Dear Sir: All my potatoes blighted badly this year except Early Manistee and Ionia Seedling, which are perfectly free and green yet, and will yield, I think, 200 bushels per acre. From the other kinds I expect only half of that yield.

Respectfully,

O. W. Arbeiter.

Ora D. Blanchard of Sullivan Co., N. H., writes: "I raised 243 bushels from the peck planted, and I have the satisfaction of knowing that this is the best corn ever grown in New Hampshire."

Mammoth Yellow Flint—Over 150 Bushels per Acre.
